Close security loopholes

Percentage of global IT decision makers who believe employees increase security breach risk by:

Security is top of mind as IT infrastructure has become more complex. Businesses have quickly rolled out new technologies, and IT has tried to accommodate hybrid workers, both remote and in-office, often on multiple devices. When employees download apps to make themselves more productive, their intentions are good—but often the outcome is not. Consolidating apps onto a single platform can help close these security loopholes.

How Microsoft 365 can help

Microsoft 365 provides a holistic approach to security, helping you protect identities, data, applications, and devices across on-premises, cloud, and mobile environments. This approach addresses the four foundations of computer system security:

- 1. Identity & Access Management**
Securing identities as part of a Zero trust strategy
- 2. Information Protection**
Locating and classifying information anywhere
- 3. Threat Protection**
Stop attacks with integrated and automated security
- 4. Security Management**
Strengthening security posture with insights and guidance
