

How many devices *are putting your business at risk?*

Smart devices (e.g. cameras, door entry)

Connected but rarely protected.

Smartphones

Easy target for phishing and malware if unsecured.

Printers / scanners

Can store sensitive documents. Often unsecured.

Laptops

If unpatched or lost, your data could be exposed.

USB drives / external hard drives

Easy to lose. Can spread malware.

Routers / Wi-Fi gear

Weak passwords or old firmware = open door to hackers.

Desktop PCs

Old hardware = outdated protection.

Tablets

Often overlooked, same risks as phones and laptops.

Every device is a potential risk. Make sure they're all secured.
We can help with that. Get in touch.
